EXPERIENCE

HubSpot, Software Engineer — Remote, USA · 02.2026 - 10.2026

- Normalized clip suggestions from JSON blobs into relational tables in five stages: dual write, a backfill parsing 3 timestamp formats, runs across 5 regions with **zero failures** , a flag-gated read cutover, and cleanup
- Cut database load from frontend polling by **98%** with read-through caching on image-generation status checks, and moved status storage to a new RocksDB keyspace with a 30-day TTL
- Wrote a build-time VideoGeneration integration suite for success, failure, and access-control paths, letting the tech lead enable production autodeploys without **~$4** -per-run acceptance tests
- Developed LLM-powered media features with LiteLLM and the OpenAI Responses API, including prompt enhancement, image title generation, and async worker support
- Detected logo, icon, and illustration intent to switch prompt templates, part of the fix that lifted image-generation CSAT from ~37% to **66%** in Braintrust checks
- Deprecated legacy GPT-1/1.5 image-generation endpoints across **~7** dependent teams; owned the HubSpotVideo and media-content repos on 24/7 on-call

State Street — Boston, USA

Software Developer — 01.2025 - 01.2026

- Created a Python schema mapping service with FastAPI and Pandas that uses an LLM to map source columns to target schemas, with GEval accuracy tracking
- Added an internal service-to-service REST API for Data Quality report generation, callable directly from inside the Kubernetes cluster
- Extended the Java event-consumer service to publish multiple events per message to Cosmos DB with a parent-event ID for lineage tracing
- Shipped the schema mapping and transformation services to production with Helm charts, Kubernetes manifests, and Harness CI/CD

Software Developer Intern — 01.2024 - 08.2024

- Migrated Data Quality and Reconciliation pipelines from Jenkins to Harness, containerizing workflows with Docker and adding Veracode and Black Duck scans
- Contributed to an event-driven Email Service on Kafka and Cosmos DB that removed single points of failure and added real-time tracking

Institute for Plasma Research, Software Developer (full-stack) — Ahmedabad, IN · 12.2021 - 04.2022

- Architected a virtual conference platform in PostgreSQL, Angular, and Kafka, reaching **90%+** attendance rates
- Automated backend workflows, increasing processing speed by **27%**

Vbix technologies, Software Engineer (full-stack) — Remote, IN · 04.2020 - 12.2021

- Built a custom CRM system in Java, Spring Boot, and React, raising upsell opportunities by **23%**
- Developed a MongoDB-backed ticketing automation system, improving support efficiency by **30%**

SKILLS

Programming: Python, Java, JavaScript, TypeScript, Shell Scripting, C++
Cloud & Infrastructure: AWS, Azure, Docker, Kubernetes (AKS), Helm, Harness, Jenkins, CI/CD, Grafana, Git
Databases: PostgreSQL, MySQL, Snowflake, RocksDB, Redis, Memcached, Cosmos DB, DynamoDB, MongoDB
Frameworks & Tools: REST APIs, Event-Driven Microservices, Apache Kafka, FastAPI, Spring Boot, Pandas, LiteLLM, OpenAI Responses API, Braintrust

EDUCATION

Northeastern University · M.S. (Hons.) Software Engineering · 3.88 / 4.00 — 2023 - 2024

Dharmsinh Desai University · B.Tech (Hons.) Computer Engineering · 3.93 / 4.00 — 2018 - 2022

PROJECTS

Soundsage (Python, Pandas, scikit-learn, Flask, React)

- Wrote a KNN music recommender on Spotify's **12M** -song dataset with a Flask-React app for playlist uploads and ratings
